EXAMINER

MERCEDES, DISMERY E

ART UNIT	PAPER NUMBER
----------	--------------

2651

DATE MAILED: 03/17/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/824,861

Applicant(s)

PANG ET AL.

Examiner

Dismery E. Mercedes

Art Unit

2651

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on 15 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6, 8-12, 14-18, 20-22 is/are rejected.
- 7) ☒ Claim(s) 7, 13, 19 and 23 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 4/15/2004 is being considered by the examiner.
- 2.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

4. Claim 1-2,15-16 rejected under 35 U.S.C. 102(b) as being anticipated by Wiselogel (US 6,130,796).

As to Claim 1-2, 15-16, Wiselogel discloses identifying a last usable track as a function of a parameter (according to Applicant's definition of an usable on page 6, lines 1-7 of instant specification, the examiner believes Wiselogel discloses a last usable track as claimed, as depicted in Fig.4, when the actuator encounters an inner-outer diameter crash stop); and defining a standoff band of tracks relative to the last usable track to obtain an achieved maximum track on the surface (according to Applicant's definition of standoff band of tracks, page 6, lines 10-15 of instant specification, the examiner believes Wiselogel discloses a standoff band of tracks as claimed, as depicted in Fig.4, "102, 103, 104, and 203"; col.2, lines 35-50; col.4, lines 23-64).

As to Claim 2, Wiselogel further identifying the last usable track on the surface further comprises identifying a last usable track, beyond a default maximum track, on the surface as a function of the parameter (as depicted in Fig.4, 201,204,102-104).

Art Unit: 2651

As to Claims 15-16 are apparatus claims drawn to the method of claims 1-2, therefore are rejected for similar reasons as set forth in the rejection of claims 1-2, above.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3-6,8-10,17-18,20 rejected under 35 U.S.C. 103(a) as being unpatentable over Wiselogel in view of Patterson (US 6,480,361).

As to Claim 3, Wiselogel discloses the method as claim 1, but fails to particularly disclose the last usable track is identified as a function of a bias or position parameter. However, Patterson discloses such (according to Applicant's definition of a last usable track as a function of a bias parameter, page 6, lines 4-6 of instant specification, the examiner believes Wiselogel discloses such col.5, line 58-col.6, line 13). Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method as disclosed by Wiselogel with the above teachings of Patterson, the motivation being to provide such method with the capability of preventing movement of the actuator arm beyond the outer diameter of the disc (abstract, Patterson).

As to Claim 4, Wiselogel further discloses wherein identifying the last usable track on the surface further comprises identifying the last usable track on a recording media surface (as depicted in Fig.4).

As to Claim 5, Patterson further discloses identifying usable track as a function of a bias parameter associated with an actuator which positions a data head over the recording media (col.5, line 40-col.6, line 13).

As to Claim 6, Patterson further discloses, wherein identifying the last usable track as a function of when the bias parameter exceeds a threshold (col.6, lines 16-39).

As to Claim 8, Patterson further discloses identifying the last usable track as a function of when the bias parameter is indicative of an obstruction encountered by the actuator (col.5, line 40-col.6, line 13).

As to Claim 9, Wiseloge further discloses wherein the obstruction is an inner diameter crash stop (as depicted in Fig.4, when the actuator encounters an inner-outer diameter crash stop).

As to Claim 10, Patterson further discloses wherein identifying the last usable track as a function of when a rate of change of the bias parameter exceeds a threshold rate of change of the bias parameter (col.6, lines 16-39, wherein when the speed is above a threshold encounters obstruction with the crash stop to prevent the transducers from moving past the outer diameter of the disc).

As to Claims 17-18,20 are apparatus claims drawn to the method of claims 5-6,8-10 therefore are rejected for similar reasons as set forth in the rejection of claims 5-6,8-10, above.

7. Claims 11-12,21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wiseloge in view of Patterson (US 6,480,361), further in view of Emo et al. (US 6,260,257).

As to Claims 11-12, the combination of Wiseloge and Patterson discloses the method as claimed in claim 4, but fails to particular disclose wherein identifying the last usable track as a function as a function of a position error signal (PES) value (figs.4-6, 8,10); as per claim 12, Emo et

Art Unit: 2651

al. discloses that is well known in the art to use average PES and PES for adjusting crash stops (fig.4 col.3, lines 1-16). Therefore, it would have been obvious to of ordinary skill in the art at the time of the invention to modify the method as disclosed by Wiselogel and Patterson with the disclosed teachings of Emo et al., the motivation to provide such method with the ability to increase the recording density of the disk drive.

As to Claims 21-22 are apparatus claims drawn to the method of claims 11-12 therefore are rejected for similar reasons as set forth in the rejection of claims 11-12, above.

Allowable Subject Matter

8. Claims 7,13, 19,23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Meyer (US 2004/0160696); Gan et al. (US 6,822,821); Klaasen (US 6,567,232); McNeil et al. (US 6,940,679).

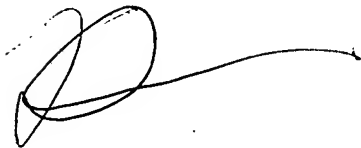

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dismery E. Mercedes whose telephone number is 571-272-7558. The examiner can normally be reached on Monday - Friday, from 9:00am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wayne R. Young can be reached on 571-272-7582. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
